

Benchmarking and Cost of Risk

Turning your insurance program into a competitive advantage.

Holden Risk Advisors helps measure the performance of your risk management department so you can identify your true total cost of risk and see how it compares to your competitors.

An independent review provides valuable insight about a company's insurance program, ensures the company is receiving the appropriate value in the insurance program, and satisfies the desire for corporate transparency.

Holden Risk Advisors provides objective advice about the structure, limits, retention, and premiums paid for your insurance program and create a dashboard you can use to evaluate the performance of the risk management program.

Holden Risk Advisors base our findings on a number of factors, including proprietary, anonymous client data, publicly available benchmark information, and decades of experience providing similar services to hundreds of companies.

Holden Risk Advisors understands that benchmarking requires a quantitative analysis combined with qualitative assessment to be valuable.

We recognize that quantification is only the first step and for any benchmarking activity to be successful, the data must be qualified to be valuable. While the benchmark data itself represents the quantitative analysis, the qualitative assessment includes understanding our client's corporate risk tolerance.

Holden Risk Advisors will provide you with solutions and recommendations tailored to your unique risk tolerance and specific risk profile when evaluating insurance coverages, if limits of liability are sufficient, retentions are appropriate, and if premiums paid are competitive.
